¹ According to the IAEA, “Technical and Scientific Support Organizations (TSOs) comprise experts who deliver technical and scientific services to national nuclear regulatory authorities and industry and may advise governments to assist them in achieving the highest possible levels of safety and security for nuclear, waste management, radiation protection, and so on. TSOs comprise professional experts who maintain high levels of competence, have long-standing experience, and are able to provide global, consistent technical and science-based answers and approaches to safety and security — independent of external interests.” In this document, TSO has been interpreted broadly to also include, where appropriate, external organisations that provide research services to national nuclear regulatory authorities.
