

The EGRM Recovery Framework

Policies, procedures, principles, objectives, strategies and tools for the purpose of managing the process of recovery from an emergency

National-level recommendations (examples)

EGRM recommendations include:

- i. Adopt an **all-hazards approach** and clarify **governance roles**;
- ii. Establish **indicators of well-being** with **relevant stakeholders**;
- iii. Identify ways to **support the economy** in affected regions/commodities by addressing the potential loss of image, taking into account the long-term management of the radiological situation;
- iv. Develop a **monitoring programme** with clear objectives to support dose assessment;
- v. Embed specific post-accident recovery arrangements for the **protection of the environment** within national policy, strategy and legislation;
- vi. Develop recovery **risk communication**;
- vii. Develop a **programme of exercises** to test planning arrangements for recovery management and to build and reinforce resilience;
- viii. Plan for long-term protective actions to reduce or maintain activity concentrations in **food products and drinking water** below established levels;
- ix. Develop a **holistic strategy for remediation and decontamination**; and
- x. Adopt a **proportionate approach to waste management** preparedness.

Some highlights from the workshop

- A comprehensive framework with general guidance but not prescriptive and providing flexibility for the practical implementation
- Main challenge in preparedness to involve relevant decision-makers and stakeholders: multi-topics, multi-levels...
 - Inter-ministerial approach
 - Key role of local stakeholders, notably mayors
- Due consideration of the evolution of the management with time:
 - Transition from emergency to recovery
 - Sustainability of the management and future of the local communities
- Acknowledgement of the key role of “non-radiological” effects
- Legal and compensation issues to be addressed in preparedness
- Identify and develop processes for managing food, monitoring, decontamination, waste
- Develop tools for exercising recovery framework in preparedness
